

ABSTRACT OF THE DISCLOSURE

There is disclosed a recording schedule reservation system for reserving a recording schedule of a broadcasting program through a network with an enhanced operating capability by enabling recording of a broadcasting program to be scheduled for a video recording/reproducing apparatus such as a home video recorder by utilizing an externally portable telephone or the like, and the system comprises: a program information server connected to a network, having broadcasting program information and client's information; a video recording/reproducing apparatus having a function to access the program information server to reserve a recording schedule of a predetermined program; and a information terminal apparatus which accesses the program information server to browse broadcasting program information and is capable of selecting any desired broadcasting program, in which the program information server enables the video recording/reproducing apparatus to reserve the recording schedule of the selected broadcasting program selected by the data communicating terminal apparatus.
